

Written Tasks

Certificate in Fluoride Varnish Application — DNT

Instructions

Complete all three written tasks below. Each response should be 400-600 words. Draw on your learning from the course modules and your own clinical experience. Save this document and upload it to the Written Tasks section of your course dashboard.

Task 1 — The Consent Process

Explain the consent process as it applies to fluoride varnish application in dental nursing practice.

Your response should cover: what valid consent means, how consent differs for different patient groups (including children and patients who lack capacity), how you obtain and document consent, and what you would do if a patient declines treatment.

Word count: _____

Learner signature:

Task 2 — GDC Registrant Responsibilities

Explain your responsibilities as a GDC registrant and the professional and legal requirements when applying fluoride varnish as an extended duty.

Your response should cover: scope of practice, what it means to be trained, competent and indemnified, your duty to raise concerns, the importance of record keeping, and how you maintain your competence going forward.

Word count: _____

Learner signature:

Task 3 — Fluoride Science and Caries Prevention

Explain the science of fluoride and how it prevents dental caries.

Your response should cover: what fluoride is and where it is found naturally, the mechanism by which fluoride prevents decay (remineralisation, inhibition of demineralisation, antibacterial action), the evidence base for fluoride varnish use in the UK including Delivering Better Oral Health, and the risks associated with fluoride including toxicity and fluorosis.
